EARTH WORM™

We take pride in going above and beyond to ensure your machinery can reach its true potential.

Since 2004 we've been on a mission to increase the utilisation of equipment and profitability of work for machine owners through their use of high-quality hydraulic attachments.

We do this by travelling the world to source the best attachments for heavy industry. Construction, civil, agriculture, and heavy industries rely on our expertise for identifying the right equipment for their unique requirements.

Understanding all the 'moving parts' on both the machinery and our customer's operation makes a

huge difference when it comes to increasing machine utilisation and profitability.

That's why we don't just tick the box and sell the attachment. Instead, we look at the small details and big picture of our customers' work. We assess their existing equipment, analyse their specific needs, and work together with them to ensure the optimal outcome.

Then we back this outcome with the type of industry-leading technical support and expert knowledge that only comes from years of in-the-field experience.

Our Management Team

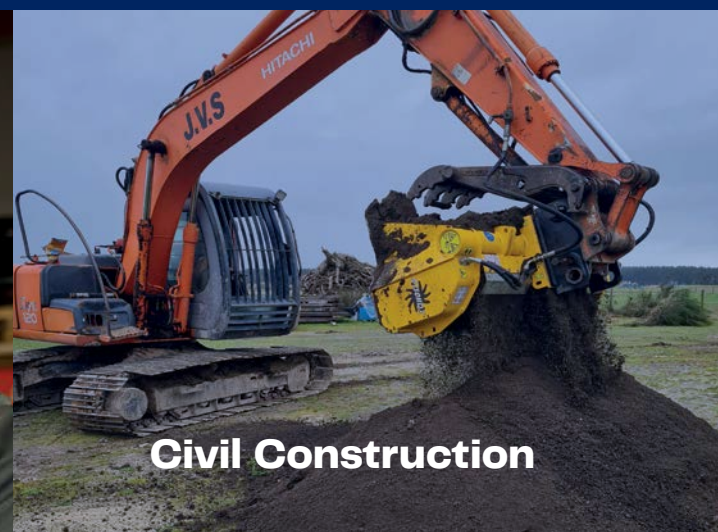

“We don’t just tick the box and sell the attachment. Instead we look at the small details and big picture of our customers’ work.”

Our mission

Unearth new machinery efficiencies.
Supply premium hydraulic attachments.
Build enduring customer relationships.

Who we work for:

Civil Construction

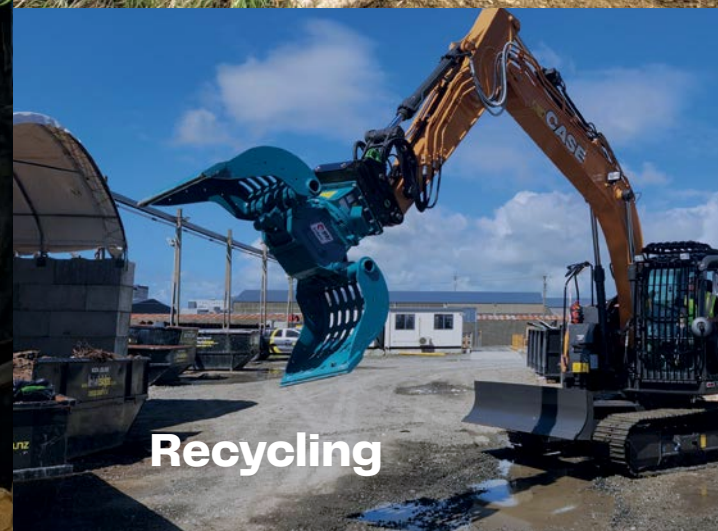

Demolition

Farm & Rural Contracting

Tree Care & Processing

Recycling

Drilling & Piling

Boring. Exciting. Boring.

We get excited about the performance of our Auger Torque drive units for good reason. This equipment is as reliable as it is resilient – and each is backed by our industry-leading service and parts support. That means you get powerful, adaptable, and 100% dependable drilling – day in, day out. Because boring should be boring.

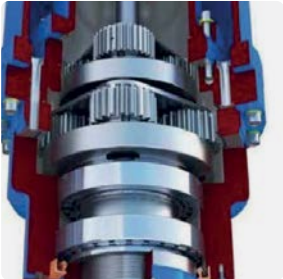

DRIVE UNITS

For decades Auger Torque has set the global standard for drilling, the European brand renowned for the power, innovation, and reliability of its equipment. Earthworm is proud to bring these strengths to New Zealand since 2004.

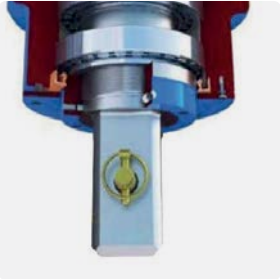

These drive units are purpose-built for high-torque drilling across all machine sizes and ground conditions, making them the ideal choice for excavators and skidsteers across screw piling, post driving and heavy-duty drilling applications.

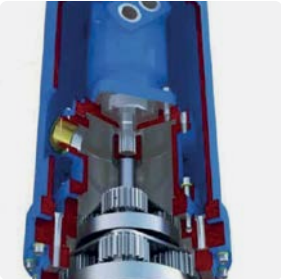

Features:

Epicyclic planetary gearbox for amplified high-torque output

Unique non-dislodgement output shaft – a must-have safety feature that guarantees the shaft will never fall out

High quality hydraulic motors backed by the most comprehensive warranty in the industry

Forged hood ears & locked hood pins for extra strength & safety Hitch options available: single, double pin or cradle hitch made to your specs

With 20+ models available, Auger Torque can provide drive units to suit excavators from 750kg to over 50 tonnes. We work closely with our customers to ensure the right unit is matched to their unique requirements.

Large
Excavators

Midi
Excavators

Micro
Excavators

AUGERS

The right auger makes all the difference in speed, safety, and efficiency on site – which is why ours are engineered to cut cleanly and hold their teeth, no matter what the ground throws at them. As official New Zealand distributors for Auger Torque and Tebco, we provide a massive range of drilling head configurations to suit virtually every machine and application across the country.

- Features:**
- Heavy duty tube using highest grade steel, sized to suit machine and application
 - Shallow pitch flights engineered to maximise cutting efficiency & retain spoil on extraction
 - Auger Torque Shock Lock™ tooth locking system means losing teeth down the hole is now a thing of the past
 - Constant spiral cut boring heads teeth angled for fresh cuts on every revolution with no clogging
 - Wide range of pilot & tooth options for every ground condition
 - Lifetime parts replacement warranty on the Shock Lock tooth system

Hard Rock

Tungsten

Rock

Tungsten

Earth Teeth

AUGER ACCESSORIES

Whether you're removing stumps, splitting firewood, or mixing and placing concrete, our range of Auger Torque attachments are the ideal way to get more from your existing drive units. The stump planer's sharp pilot point guides three cutting blades cleanly into the stump, the log splitter cone's coarse double wound thread bites and splits large rings with speed and efficiency, and the concrete mixer bowl clips straight onto any drive unit with a cradle hitch for a simple, no-fuss concrete system.

- Features:**
- Stump planers available in 250 & 350mm diameter
 - Log splitter features a coarse double wound pitch for fast, efficient splitting
 - Mixer bowl fits any drive unit with a cradle hitch to mix, move, & pour in one go
 - Hub options available to fit all drive units

Clean Out Disc

Making sure that bigger's better

When you need to go big, we can go big. With the power and precision of Auger Torque and Tebco engineering we provide a wide range of heavy-duty drilling solutions, delivering rapid turnaround on custom-built units and fast delivery around New Zealand. When the pressure's on with project deadlines and deliverables, we'll ensure you can hit the ground running.

HARD ROCK AUGER

- With hardwearing quality & life-extending design features, it's the hard rock auger of choice for New Zealand drillers.
- The revolutionary design utilises three cutting edges & massive rotating pick teeth to dramatically increase drilling efficiency.
- Custom augers are available with short lead times.

ZED ROCK AUGER

- Rock-cutting power of a core barrel. Debris-clearing functionality of a traditional auger.
- Specialised tool with cleverly positioned teeth & unique internal, inverted cutting head that clears out the hole.
- Unmatched in marginal conditions. Excellent for CFA drilling in hard rock.

CORE BARRELS

- Sharper, harder teeth & high-pressure cutting action when compared to conventional augers & hammers.
- Ideal for breaking up rock and clay.
- Produces a clean, straight borehole, with compact formations possible due to barrel's crushing ability as it drills

CLEAN OUT BUCKETS

- Designed to efficiently clear foundation piles of loose rubble, sand, gravel, or slurry.
- Gate mechanism locks the bucket closed, and barrels streamline the drilling process in all manner of conditions.
- Customisable to bail water if needed.

For when it's time to break new ground. And old ground too.

DEMCO Rock Breakers deliver a powerhouse performance time after time. With options available for one-ton excavators and 100-ton excavators (and everything in between), these hard hard-working hydraulic hammers are ideal for demolition, mining, quarrying and public works.

NITROGEN POWER ROCK BREAKERS

Commonly used in civil construction, demolition, trenching, and smaller quarry work, the DEMCO gas-series breakers pack a powerful punch in a lightweight, portable package. High impact force is generated by a nitrogen gas pressure working together with the hydraulic pressure of the host machine at the top of the piston. This is effective rock-breaking power and performance at a lower initial investment – the ideal option for many New Zealand companies.

Features:

- Can be operated at a higher back pressure than a fully hydraulic breaker
- Reinforced vibration dampening system for extra protection to the quick hitch & carrier machine
- Backed by a 12month warranty & wear parts and technical support on hand in New Zealand when you need it
- Fully enclosed housing to protect the power cell & minimise noise

FULL HYDRAULIC ROCK BREAKERS

Our range of fully hydraulic breakers excel in heavy-duty, high-production applications such as larger quarries, mines, and infrastructure projects. Designed to integrate seamlessly with hydraulic carrier equipment, these breakers leverage the machine's hydraulic system to generate industry-leading impact energy for New Zealand's toughest jobs. And they do so at a very helpful price too.

Features:

- Unique piston design reduces power requirements from the excavator
- Lower operating pressure lowers fuel consumption
- Fully sealed accumulator ensures long service life & lower maintenance
- Special hydraulic suspension system provides anti-blank-fire protection
- Reinforced vibration dampening system for operator comfort
- Built tough for all types of rock (from Air Supply to AC-DC)
- 3 year warranty for ongoing peace of mind

Tool options

Don't truck around with your on-site materials

Want to avoid wasteful transport and topsoil costs? It's time to get the truck out of there. Get a Gyru-Star screening bucket and you'll be able to make the most of on-site materials.

Many attachments make light work

Screening, sorted, when, where, and how you need it.

Increase capacity. Improve capability.

A good screening bucket provides operators with the ability to quickly separate and re-use valuable material resources – everything from topsoil and compost to demolition waste to woodchip, sand and garden waste. It ensures the quick formation of pipe bedding, cable padding, and trench backfill. It delivers fast and effective demolition clean up.

Reduce transport, time, cost & waste

The chance for costs savings and faster work make the screening bucket a common-sense purchase for many.

That means big savings on transport time and cost, less purchasing of additional materials for the project, and less spent on dump fees.

Scoop, screen, collect & conquer

Working in places such as quarries, ski fields, mines, rural developments and forestry blocks means a lot of haulage – and often a long wait if equipment fails. For these remote sites a quality screening bucket is worth its weight in gold.

Gain more ground

Every bucket is also backed by industry-leading service. It is expertly matched to your machine, with parts always on hand when and where needed. In this way it will work to peak efficiency day after day, year after year.

STEEL ROTOR SCREENING BUCKETS

Since the early 1990s Remu screening buckets have been leading the way in robust screening and waste separation. Hard wearing and low maintenance, these attachments provide the bigger, stronger screening solution for operators dealing with heavy-duty materials and heavyweight workloads. From civil construction and pipeline padding to demolition waste and everything in between the Remu range adapts to the job at hand without breaking a sweat.

Features:

Patented spiral rotor design for superior power & productivity, & optimised bucket mass to volume ratio to maximise payload.

Hard wearing, low maintenance construction, suitable for heavy-duty civil construction, demolition waste, aggregate processing & more.

Modular XO Series enables fast changeover between work modules, with interchangeable rotors for screening, mixing, or soft crushing applications.

Made in Finland which (according to an international study) is apparently the happiest country in the world.

Remu EE & EP Series

EE and EP buckets are designed to maintain an optimal ratio between the mass and volume of the bucket, saving the lifting capacity of the machine for the material itself.

Remu XO Series

Need a do-it-all attachment? The Crossover bucket is a new approach: one bucket frame with multiple modules meaning you can fast-change the complete module to a new screening set-up or mixer bucket for a quick transition between different jobs.

Remu CR 1100 Crushing Bucket

Designed to recycle & reuse construction materials & demo waste such as bricks, roof tiles, asphalt, & wood waste, the high crushing force & robust construction of the CR 1100 makes it ideal for forward-thinking civil construction & demolition operators.

POLY-STAR SCREENING BUCKETS

Gyru-Star screening buckets are known for their general lightness, tough construction and all-round versatility – making them the ideal choice for the recycling, farming, and civil industries looking for incredibly fast and effective screening solutions. Perfect for excavators, tractors, loaders and skid steers, these buckets provide highly efficient material separation on site for topsoil screening, compost processing, and construction waste separation. With a Gyru-Star screening bucket there's no need for costly double handling. You can save time and transport costs and quickly turn waste into valuable soil or backfill.

Features:

- Zero-maintenance driveline with sealed bearing & carbon self-adjusting drive belts
- Polyurethane stars = less wear & quieter operation
- Optimised rotor position for optimised throughput
- Compact design with fully enclosed motor & hoses
- Strong monocoque bucket design with double skin floor & two drive line cavities
- Easily attached to a wide range of carriers
- Go-anywhere versatility, less equipment on site, more work in sight

For:

- TOPSOIL
- COMPOST
- MIXING & BLENDING
- PIPELINE & CABLE PADDING & MORE....

When the tough gets going, the going gets easy

Tough jobs need tough tools

We provide world-renowned demolition attachment technology, carefully tailor them to your machine, and back everything with diligent local support, quick parts access, and valuable service guidance.

From primary demolition through to processing and site clean-up, this equipment delivers efficient cycle times, precisely controlled operation, and steadfast performance.

For the best fit and value for machines from 1 tonne to 200 tonne, our demolition equipment ensures you can work with equal amounts speed and safety, strength and precision.

How we meet New Zealand's demands for the best in demolition attachments.

World-class build quality

Made from high-strength steel for demanding conditions, designed for durable wear resistance and long service life.

Fast cycle times

Built with optimised hydraulics and patented speed-up valves for maximised power, reduced cycle times, and better protection.

Precision in operation

Consistent, predictable performance provides cleaner demolition and safer handling.

Matched to your machine

Correct sizing and configuration ensure optimised force without oversizing the attachment, improving carrier efficiency.

Service when you need it

Local support and parts supply of parts mean any equipment downtime is kept to a minimum.

COMBI CRUSHERS

Combining heavy duty concrete breaking and metal cutting capacities in a single hydraulic attachment, the MBI Combi Crusher improves efficiency in every phase of operation. The powerful cylinders and a twin pin system make short work of breaking reinforced concrete while strong jaws are equipped with shears and cutting guides to quickly and efficiently deal to the metal.

Features:

- 360° hydraulic rotation for precise positioning in high reach demolition
- Reinforced steel jaws ensure maximum wear resistance
- Interchangeable cast teeth & heat-treated blades deliver impressive durability
- Patented Speed-Valve makes for fast cycle times and also protects the hydraulic system from pressure spikes
- Crushes project deadlines easily as well

DEMOLITION MULTI-SYSTEMS

There's nothing quite like a demolition job that comes in on time and to budget. It's certainly helpful when you can choose the ideal jaws for the job, be it for crushing concrete, cutting rebars, processing scrap or cutting sheet metal. The MBI Multisystem offers this cost-effective solution for getting more from your fleet without sacrificing performance or power.

Features:

- 360° hydraulic rotation for precise positioning in high reach demolition
- Powerful inverted cylinders capable of crushing reinforced concrete
- Unique central single-pin design to allow for quick replacement of various leg kits
- Speed valve reduces opening & closing times
- Interchangeable teeth & blades to reduce downtime

Available Jaws

CR Crusher Jaws
Primary demolition of concrete structures

CR Pulveriser Jaws
Secondary demolition and rebars separation

CC Combi Cutter Jaws
Demolition of heavily reinforced concrete structures

SH Shear Jaws
Metal structure demolition and scrap processing

PSH Plate Shear Jaws
Tank demolition and plate metal processing

PULVERISERS

The MBI Rotating Pulveriser delivers the precise positioning required for complex demolition tasks. With 360° hydraulic rotation, users have ultimate control and manoeuvrability, ensuring easy operation in tight or awkward spaces or when working at height. The optional interchangeable tooth plates with two different toothing patterns also reduces the maintenance downtime associated with tooth wear.

Features:

- Patented Speed-Valve speeds up opening & closing times
- Low height rotator for superior weight distribution
- Rugged Hardox steel construction to cope with demanding projects
- Option of interchangeable tooth plates to increase versatility
- Ideal for separating iron & concrete

The MBI Fixed Pulveriser (MCP) is a critical attachment for crushing and separation tasks. With a jaw designed for effective ground demolition and advanced speed-valve technology, it makes short work of reinforced concrete, asphalt and brick.

Features:

- Patented Speed-Valve speeds up opening & closing times
- Rugged Hardox steel construction to cope with demanding projects
- Interchangeable tooth plates option = increased versatility, decreased maintenance downtime
- Strength & speed, what more could you need?

HEAVY STEEL SHEARS

The market-leading MBI brand has changed the game with this new generation of Eagle Shears – the Eagle III. The new blade system fully encloses the piercing tip for greater strength and easier maintenance, and a fieldremovable main pin makes onsite maintenance faster and more cost-effective. Water-cut one-piece jaws remove risk of delaminating or deforming from heat stress and the oversize inverted cylinder comes with a completely forged rod and superior seals for long-lasting durability.

Combining unparalleled strength with unerring accuracy and efficiency, these shears have increased performance criteria across the board – all at a price that is lower than similar models on the market.

Features:

New compact frame with a unique weight-performance-ratio & greater stability of the excavator.

Up to 30% more cutting force with up to 9% larger opening to maximize results.

Single integrated guide puck gives 100% cutting capacity even at difficult angles, increasing speed & productivity.

New armoured protection with interchangeable Hardox® 500 steel plates on jaw profiles, for a high level of wear resistance & ease of replacement.

COMPACT STEEL SHEARS

DEMCO shears provide an optimised shearing / cutting angle and continuous force through the cycle, all with a design that ensures maximum strength and minimal stress on the carrier. With a heavy-duty cylinder guard, abrasion-resistant steel, and replaceable 4-way turntable blades, they are ideal for tight spaces and interior sites.

SHEAR DISMANTLERS

For carefully dissecting, cutting, and extracting value, Mantovanibenne shear dismantlers are cleverly designed and built tough, powerful cylinders and an integrated hydraulic brake combining with a continuous rotation & load blocking valve to ensure scrap metal operations can work with ongoing accuracy and efficiency.

The performance of a lifetime

MBI Eagle Shears are built to the highest standards and designed for easy, costeffective repair and maintenance. That means they can deliver the highest quality performance day after day – and increase your return on investment year after year.

SORTING GRAPPLES

For quick, precise, and effective handling of a wide range of demolition, recycling, and waste processing materials the MBI range of sorting grapples delivers invaluable adaptability and manoeuvrability. The new hydraulic system improves performance and durability, simplifying both everyday operation and ongoing maintenance. And, like all Earthworm attachments, every grapple is backed by our renowned post-sale support and service capability.

- Features:**
- Load lock valve prevents valve from opening without operator control
 - Parker® twin motors with new pressure valve on heavier models
 - Powerful cylinders with integrated hydraulic brake
 - Interchangeable standard blades can be turned twice before replacing
 - Optional toothed blades, side closure, and fixed sorting grapples available

MAGNETS

Earthworm's worldwide search for the best hydraulic magnets led us to the doorstep of Atib Magnetics in Italy. Founded in the 1970s, Atib is known for its absolute care in craft. Decades of working closely with industry has created a range of customisable models to suit a range of specific handling needs in the demolition, construction, and recycling fields.

- Features:**
- 100% designed and manufactured in Italy
 - Options for a chain or quick coupling plate mount
 - Optional interchangeable teeth for raking debris
 - Internal generator requires only two hydraulic hoses to run
 - Counter excitation system to ensure the quickest material release

POLY GRABS

Designed for superior efficiency in handling recyclables, scrap metal and green waste, the ICM polyp grab is an ideal all-purpose handler. ICM's high quality European manufacturing is enhanced by Baltrotor rotators and custom hitch brackets fitted by the expert team here at Earthworm.

- Features:**
- For 1-15 ton excavators or truck cranes with a load capacity of 2-25 tons
 - Strong clamp force for secure handling of variable materials
 - HARDOX 450 steel tips ensure a precise grip & a long service life
 - Unique manifold block design to prevent oil leaks
 - Options for hydraulic rotator & double swinging link

ORANGE PEEL GRABS

Peiner SMAG is well-known for sophisticated load handling solutions, the brand a common sight in ports around the world. Now scrapyards, steel plants and recycling facilities are benefitting from the German company's 70-year legacy in materials handling technology. One such helpful attachment is their orange peel grab, which offers an impressive handling rate and staunch hydraulic design for the reliable, economical handling of hefty bulk materials.

- Features:**
- Strong axial capacity, high torque & integrated maximum pressure valves
 - Torsion-resistant shell design with welded steel construction
 - Shell tips made of highly wear-resistant manganese steel
 - Unique protective design guards hydraulic system against impact
 - Central mount machined from a single block of solid steel, ensuring no welds at this high stress area & reducing the risk of cracking and distortion

PLATE COMPACTORS

Why use more machines than you need to? From farm fencing to heavy-duty civil contracting, the Malagati Plury is the jack-of-all-trades (and master-of-many) plate compactor for excavators and skidsteers.

For operations looking to expand workload and increase efficiency the multi-purpose functionality and enduring reliability of this compactor cannot be ignored. The built-to-last vibration driver delivers an incredible range of possibilities, from farm fencing to drainage, civil works and piling, making it the perfect attachment for a range of work sites and tasks.

Features:

- Single attachment that compacts, pre-drills, grabs & positions posts, drives piles, extracts & cuts
- With quick-change accessories, the same vibrating body can tackle different jobs with minimal downtime
- Very high compacting force available with the double eccentric Mass models, providing exceptional pile-driving ability
- Fits carriers approx. 1–40 tons for a standardised system across a mixed fleet

**1 attachment with 12 accessories?
If there's one thing this compactor is,
it's that it's more than one thing.**

**Compact.
Infix. Pre-drill.
Grapple. Cut.
Trench. Lock,
Stock, Barrel.**

A cut above

Meet NZ's safest grapple saw — built to handle confident civil works and vigilant vegetation management without breaking a sweat. Engineered specifically as a complete clamp-and-cut solution (compared with other Frankenstein contraptions in the market), the Vosch grapple saw delivers the superior performance and exceptional handling on every job.

See the forest for the trees, then cut, clear, and transport it with confidence.

Faster

Our grapple saws, log grapples and tree shears are second to none, this superior equipment delivering versatile useability and steadfast performance day after day, year after year. For wood handling and processing speed, power, and efficiency it's the right choice.

Safer

In a challenging and hazardous working environment operators need absolute trust and confidence in their equipment. We don't settle for 'close enough'. Every attachment is purpose-built to deliver leading stability, safety, and performance criteria. Our customers have peace of mind with every piece of timber cut and transported.

Better

It's not just the world-class quality of Earthworm's attachments that deliver optimal efficiency in action. We back our brands with industry-leading service and support, ensuring all attachments are correctly scoped and matched to our customer's needs, and holding all necessary parts to keep their machinery moving.

GRAPPLE SAWS

When tree work demands speed, control and serious cutting power, the Vosch grapple saw rises above the competition. Designed exclusively as a fixed grapple saw for excavators across a wide range of sizes, these unique attachments combine the grip of a grapple with a high-performance saw, letting operators cut, hold and clear in a single motion. Sourced from world-leading manufacturers and supplied with Earthworm's custom-made hitch brackets, these machines are ready to work from the moment they arrive on site.

Features:

Unique design provides fast, effective & efficient cutting, ensuring there's no need to change attachments for grapple work.

Heavy duty rotator units with 4 hydraulic motors for unbeatable holding & rotating torque, housed within high-strength steel construction.

Strong, heavy 3/4" pitch chain (compared to standard .404 pitch chain), enabling the chain to spin slower & avoiding dangerous chain shot if it breaks.

Designed to fit a wide range of excavator brands & models, supplied with Earthworm's custom-made hitch brackets

Powerful 33" or 40" saw bar to make light work of large trees.

LOG GRAPPLES

Italian brand International Construction Machinery (ICM) is popular for good reason, and their hydraulic log grapples have led the way for years. From the lightweight GRA-L, ideal for low-capacity machines, to the high grip strength GRA-M, this cutting-edge equipment can be used for a wide range of applications across all types of working environments.

Features:

- Superior quality European manufacturing – the gold standard for grapples
- High strength steel for maximum strength & minimal weight
- Long lasting bronze bushings
- with hardened & chromed pins
- Optional top quality Baltrotor rotators available to suit swinging or fixed hitch brackets
- Supplied with Earthworm's custom-made hitch brackets

TREE SHEARS

ICM's GRA-C tree shears have the speed, power, and precision that make them the best choice for forestry and farming. The pierced top plate allows coupling for any excavator (with or without a slew ring), and the low operational weight and high cutting capacity makes them ideal for branch and trunk management. They're ready for all your lopping and chopping needs.

Features:

- Exceptionally long-lasting operational life
- Replaceable Hardox400 blade for extra durability
- Taller body for better tree holding
- Pierced top plate for easy coupling
- Ready to fit every excavator brand & model

HEDGE TRIMMERS

Trimming and shaping high trees, deep hedges, and difficult to access shrubbery is no longer a tall order thanks to the Auger Torque Hedge Trimmer. With a range of motor sizes to suit your needs, this built-tough attachment provides extra-long reach to ensure you can cut precisely, efficiently, and cost-effectively. It's the best choice for high performance, low maintenance trimming with 100% confidence.

Features:

- Suitable for 1.5 – 8 tonne excavators
- Available in a range of motor sizes
- Also ideal for cutting long grass & brush
- Easily replaceable individual cutting teeth
- Optional tooth extension bar delivers full 2.5 metre cutting length

SKIDSTEER ATTACHMENTS

Our range of skidsteer attachments provides enduring quality and ultimate versatility to a machinery fleet. Designed for moderate construction, landscaping and agriculture tasks, these attachments are all quick-hitch compatible and have been carefully selected from our most highly regarded manufacturers.

- Features:**
- Quick-hitch compatible for fast, easy changeover
 - Designed for moderate construction, landscaping & agriculture tasks
 - Carefully sourced from Earthworm’s most highly regarded manufacturers
 - Backed by nation-wide parts supply & service support
 - If in doubt, remember our tagline – many attachments really do make light work

DRUM CUTTERS

For confident excavation, trenching, and surface scaling in tough terrain, the Auger Torque drum cutter range should be your equipment of choice. Built to exacting standards with robust spur gears and adjustable hydraulic motors, these drum cutters are equally at home cutting rock, scaling concrete walls, or working underwater. Need a dominant drum cutter performance? Look no further.

- Features:**
- Large selection of drum & picks for fast, easy exchange of wear parts
 - Low noise & vibration = less wear on the carrier machine & the operator + lower long-term running costs
 - Waterproof to a depth of 25m
 - Large-scale drive shaft bearing, heavy-duty sealing system & robust housing structure
 - Adjustable hydraulic motors to maximise throughput

CHAIN TRENCHERS

The high-quality hydraulic motors, ‘bullet-proof’ planetary gearbox, and enduring power of these chain trenchers make them the number one choice for fast, efficient, and incredibly effective trenching in NZ. Be it with earth teeth (the best choice for trenching soft ground like earth and clay), or teeth combination (better for dry, hard or medium ground conditions), Earthworm chain trenchers will go the distance for you.

- Features:**
- Covers depths from 0.6 to 1.5 metres (up to 350mm wide)
 - Adjustable skid depth
 - Hose & coupler options included
 - Adjustable hydraulic motors to maximise throughput for each application
 - Robust housing structure designed for high-production, extreme-environment work
 - Low noise & vibration for reduced operator fatigue & carrier machine wear

Combination Chain

Earth Chain

Parts and service
What you need.
Where you need it.
When you need it.

The work doesn't stop when we make the sale. At Earthworm we take pride in carefully scoping and matching the right attachment to the right machine, ensuring the most cost-effective and work-efficient outcome, and delivering increased returns and extended lifecycles.

Our customers rely on this equipment to work hour after hour, year after year. So, we back every attachment with industry-leading post-sale service and support. Then we make sure there's parts and maintenance support when and where it's needed
